

MEDIA RELEASE – DAVEY WATER PRODUCTS 28 February 2025

The Power of Local Manufacture: Customised Pump Solutions from Davey Water Products

Davey Water Products, a leader in innovative water management solutions, continues to showcase its industry-leading capability to design and assemble customised commercial pump sets right here in Australia. With decades of engineering expertise and a commitment to local manufacturing, Davey is uniquely positioned to provide tailored solutions for the commercial, industrial, and agricultural sectors, ensuring optimal performance and reliability.

As a proudly Australian manufacturer, Davey's ISOspec CF and CM Series Pumps, designed to meet ISO2858 standards, are trusted for their durability, efficiency, and adaptability across a diverse range of applications. These pumps are suitable for municipal water supply, commercial irrigation, cooling tower operations, dust suppression, and industrial processing, among other critical uses.

Local Agility, Global Standards

What sets Davey apart is its ability to develop bespoke pump solutions with faster turnaround times, avoiding delays associated with international supply chains.

Mark Anning, GM ANZ Sales for Davey Water Products, emphasised the company's customer-focused approach, stating, *"Our local manufacturing capabilities allow us to be highly responsive to customer needs. We understand the challenges faced by Australian businesses, and by producing custom-built pump solutions here, we deliver quality, efficiency, and reliability at speed."*

Meanwhile, Joel Gresham, GM Product Development & Engineering at Davey Water Products, highlighted the company's innovation and engineering excellence, stating, *"By leveraging local expertise and advanced manufacturing techniques, we provide customers with tailored pump solutions that not only meet, but exceed performance expectations. Our ability to rapidly prototype and refine designs ensures our clients receive the best possible fit for their applications."*

Engineered for Performance and Efficiency

Davey's ISOspec pump range features bronze and 316 stainless steel impellers, high-strength cast iron casings, and heavy-duty bearings, delivering robust, long-lasting performance. With a focus on efficiency, the ISOspec Series leverages Computational Fluid Dynamics (CFD) modelling to optimise flow rates and energy consumption, reducing operational costs for businesses. Additionally, Davey's 'back pull-out' design simplifies maintenance, minimising downtime and enhancing reliability.

Bespoke Pumping Solutions – Built to Your Specifications

Davey's custom build capabilities include:

- Specialised material configurations (including full 316 stainless steel in cast, and duplex stainless steel options)
- Seal modifications and coatings for specific environments
- Performance adjustments tailored to unique flow rate and pressure requirements
- Optional factory testing and certification to ensure compliance with Australian and international standards

With a deep understanding of local operating conditions and compliance requirements, Davey Water Products continues to support Australian businesses with reliable, tailor-made pumping solutions.
